*Your One-Stop Solution,
From Concept to Final Product*

About K. K. Nag Rotomould

From concept to final product, K. K. Nag Rotomould delivers customised rotomoulded solutions with unparalleled quality and timely delivery. Our skilled team and manufacturing capacity of 350 MT per month ensure that we meet diverse needs. We produce parts ranging from 150 grams to 210 kilograms, with diameters up to 3 metres, serving industries such as Agriculture, Chemicals, Consumer Durables and Food and Beverages. For the Automotive industry, we craft lightweight, durable components that enhance performance and efficiency.

Our product range includes rotomoulded tanks, pallets, insulated tubs and floats, but our expertise extends beyond these products. We tackle complex industrial challenges with customised rotomoulded solutions and are well equipped to create products to fulfill your unique requirements.

Our facilities also offer PU/EPS filled products that have enhanced insulation, durability and structural rigidity.

The Benefits of Rotational Moulding

For large hollow components, rotational moulding is the most economical process, with benefits like:

Ability to mould
complex shapes

01

05

Short development
time

Crack and corrosion
resistance

02

06

Ability to produce
multi-layered products

Single piece
construction

03

07

Various finishes in
multiple colours

Excellent
load-bearing properties

04

08

In-mould metal
inserts

Why K. K. Nag for Rotational Moulding?

We go beyond manufacturing – we solve real world problems through smart design and precise execution. We collaborate closely with customers to create engineered polymer solutions that are functional, sustainable and built to last.

In-House Design and Engineering Capabilities

Custom rotomoulded parts built to suit your exact size, shape and strength using advanced software tools and technical collaboration.

Rapid Prototyping and Product Validation

Our rapid prototyping capabilities support accurate fitment checks and visual evaluation, enabling early design validation, minimising costly revisions and ensuring a smoother path to production.

Co-Development of Custom Products

Our technical team collaborates with yours to co-create moulds and components that are efficient, scalable, cost-effective and reliable.

Flexible Batch Manufacturing

Whether it's a low quantity run or large part size production, our process gives you the agility to manage cost, demand and inventory efficiently.
